Chapter 1

hwloc

Portable abstraction of hierarchical architectures for highperformance computing

1.1 Introduction

hwloc provides command line tools and a C API to obtain the hierarchical map of key computing elements, such as: NUMA memory nodes, shared caches, processor sockets, processor cores, and processor "threads". hwloc also gathers various attributes such as cache and memory information, and is portable across a variety of different operating systems and platforms.

hwloc primarily aims at helping high-performance computing (HPC) applications, but is also applicable to any project seeking to exploit code and/or data locality on modern computing platforms.

Note that the hwloc project represents the merger of the libtopology project from INRIA and the Portable Linux Processor Affinity (PLPA) sub-project from Open MPI. *Both of these prior projects are now deprecated.* The first hwloc release is essentially a "re-branding" of the libtopology code base, but with both a few genuinely new features and a few PLPA-like features added in. More new features and more PLPA-like features will be added to hwloc over time.

hwloc supports the following operating systems:

- Linux (including old kernels not having sysfs topology information, with knowledge of cpusets, offline cpus, and Kerrighed support)
- Solaris
- AIX
- Darwin / OS X
- OSF/1 (a.k.a., Tru64)
- HP-UX
- Microsoft Windows

hwloc only reports the number of processors on unsupported operating systems; no topology information is available.

For development and debugging purposes, hwloc also offers the ability to work on "fake" topologies:

2 hwloc

- Symmetrical tree of resources generated from a list of level arities
- Remote machine simulation through the gathering of Linux sysfs topology files

hwloc can display the topology in a human-readable format, either in graphical mode (X11), or by exporting in one of several different formats, including: plain text, PDF, PNG, and FIG (see Examples below). Note that some of the export formats require additional support libraries.

hwloc offers a programming interface for manipulating topologies and objects. It also brings a powerful CPU bitmap API that is used to describe topology objects location on physical/logical processors. See the Programming interface below. It may also be used to binding applications onto certain cores or memory nodes. Several utility programs are also provided to ease command-line manipulation of topology objects, binding of processes, and so on.

1.2 Installation

hwloc (http://www.open-mpi.org/projects/hwloc/) is available under the BSD license. It is hosted as a sub-project of the overall Open MPI project (http://www.open-mpi.org/). Note that hwloc does not require any functionality from Open MPI -- it is a wholly separate (and much smaller!) project and code base. It just happens to be hosted as part of the overall Open MPI project.

Nightly development snapshots are available on the web site. Additionally, the code can be directly checked out of Subversion:

```
shell$ svn checkout http://svn.open-mpi.org/svn/hwloc/trunk hwloc-trunk
shell$ cd hwloc-trunk
shell$ ./autogen.sh
```

Note that GNU Autoconf >=2.60, Automake >=1.10 and Libtool >=2.2.6 are required when building from a Subversion checkout.

Installation by itself is the fairly common GNU-based process:

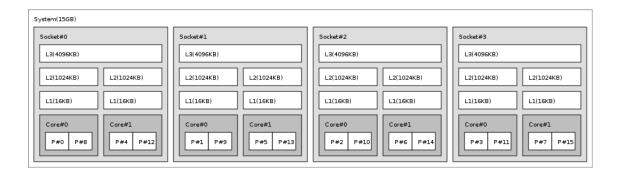

```
shell$ ./configure --prefix=...
shell$ make
shell$ make install
```

The hwloc command-line tool "Istopo" produces human-readable topology maps, as mentioned above. It can also export maps to the "fig" file format. Support for PDF, Postscript, and PNG exporting is provided if the "Cairo" development package can be found when hwloc is configured and build. Similarly, Istopo's XML support requires the libxml2 development package.

1.3 Examples

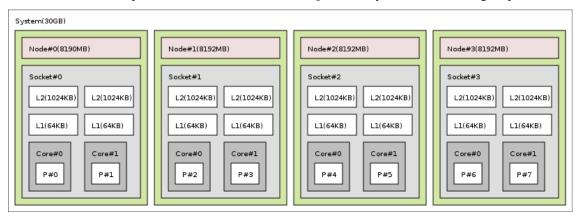

On a 4-socket 2-core machine with hyperthreading, the 1stopo tool may show the following outputs:

1.3 Examples 3

```
System(15GB)
  Socket#0 + L3(4096KB)
   L2(1024KB) + L1(16KB) + Core#0
     P#0
   L2(1024KB) + L1(16KB) + Core#1
     P#4
     P#12
  Socket#1 + L3(4096KB)
   L2(1024KB) + L1(16KB) + Core#0
     P#9
   L2(1024KB) + L1(16KB) + Core#1
      P#5
     P#13
  Socket#2 + L3(4096KB)
   L2(1024KB) + L1(16KB) + Core#0
     P#2
     P#10
   L2(1024KB) + L1(16KB) + Core#1
     P#14
  Socket#3 + L3(4096KB)
   L2(1024KB) + L1(16KB) + Core#0
     P#3
     P#11
    L2(1024KB) + L1(16KB) + Core#1
     P#7
      P#15
```

On a 4-socket 2-core Opteron NUMA machine, the 1stopo tool may show the following outputs:

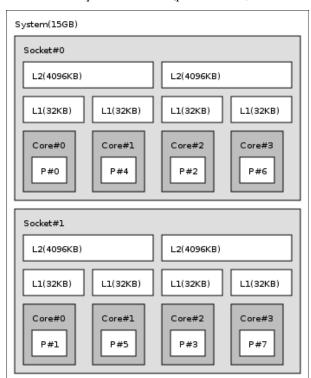

System(62GB)

4 hwloc

```
Node#0(8190MB) + Socket#0
  L2(1024KB) + L1(64KB) + Core#0 + P#0
  L2(1024KB) + L1(64KB) + Core#1 + P#1
Node#1(8192MB) + Socket#1
 L2(1024KB) + L1(64KB) + Core#0 + P#2
  L2(1024KB) + L1(64KB) + Core#1 + P#3
Node#2(8192MB) + Socket#2
 L2(1024KB) + L1(64KB) + Core#0 + P#4
  L2(1024KB) + L1(64KB) + Core#1 + P#5
Node#3(8192MB) + Socket#3
  L2(1024KB) + L1(64KB) + Core#0 + P#6
 L2(1024KB) + L1(64KB) + Core#1 + P#7
Node#4(8192MB) + Socket#4
 L2(1024KB) + L1(64KB) + Core#0 + P#8
  L2(1024KB) + L1(64KB) + Core#1 + P#9
Node#5(8192MB) + Socket#5
  L2(1024KB) + L1(64KB) + Core#0 + P#10
 L2(1024KB) + L1(64KB) + Core#1 + P#11
Node#6(8192MB) + Socket#6
 L2(1024KB) + L1(64KB) + Core#0 + P#12
  L2(1024KB) + L1(64KB) + Core#1 + P#13
Node#7(8192MB) + Socket#7
 L2(1024KB) + L1(64KB) + Core#0 + P#14
 L2(1024KB) + L1(64KB) + Core#1 + P#15
```

On a 2-socket quad-core Xeon (pre-Nehalem, with 2 dual-core dies into each socket):

```
System(15GB)
Socket#0
L2(4096KB)
L1(32KB) + Core#0 + P#0
L1(32KB) + Core#1 + P#4
L2(4096KB)
L1(32KB) + Core#2 + P#2
L1(32KB) + Core#3 + P#6
Socket#1
```

```
L2(4096KB)

L1(32KB) + Core#0 + P#1

L1(32KB) + Core#1 + P#5

L2(4096KB)

L1(32KB) + Core#2 + P#3

L1(32KB) + Core#3 + P#7
```

1.4 Programming interface

The basic interface is available in hwloc.h. It mostly offers low-level routines for advanced programmers that want to manually manipulate objects and follow links between them. Developers should look at hwloc/helper.h, which provides good higher-level topology traversal examples.

Each object contains a cpuset describing the list of processors that it contains. These cpusets may be used for Binding. hwloc offers an extensive cpuset manipulation interface in hwloc/cpuset.h.

Moreover, hwloc also comes with additional helpers for interoperability with several commonly used environments. For Linux, some specific helpers are available in hwloc/linux.h, and hwloc/linux-libnuma.h if using libnuma. On glibc-based systems, additional helpers are available in hwloc/glibc-sched.h. For Linux systems with the OpenFabrics verbs library, some dedicated helpers are provided in hwloc/openfabrics-verbs.h (this helper file is not yet useful on non-Linux systems with the OpenFabrics verbs library).

To precisely define the vocabulary used by hwloc, a Glossary is available and should probably be read first.

Further documentation is available in a full set of HTML pages, man pages, and self-contained PDF files (formatted for both both US letter and A4 formats) in the source tarball in doc/doxygen-doc/. If you are building from a Subversion checkout, you will need to have Doxygen and pdflatex installed -- the documentation will be built during the normal "make" process. The documentation is installed during "make install" to \$prefix/share/doc/hwloc/ and your systems default man page tree (under \$prefix, of course).

The following section presents an example of API usage.

1.5 API example

The following small C example (named "hwloc-hello.c") prints the topology of the machine and bring the process to the first processor of the second core of the machine.

6 hwloc

```
int main(int argc, char **argv)
    int depth, i;
    char string[128];
    unsigned int topodepth;
    hwloc_topology_t topology;
    hwloc_cpuset_t cpuset;
    hwloc_obj_t obj;
    /* Allocate and initialize topology object. */
    hwloc_topology_init(&topology);
    /* ... Optionally, put detection configuration here to e.g. ignore
       some objects types, define a synthetic topology, etc....
       The default is to detect all the objects of the machine that
       the caller is allowed to access. See Configure Topology
       Detection. */
    /\star Perform the topology detection. \star/
    hwloc_topology_load(topology);
    /* Optionally, get some additional topology information
       in case we need the topology depth later. */
    topodepth = hwloc_topology_get_depth(topology);
    /\star Walk the topology with an array style, from level 0 (always the
       system level) to the lowest level (always the proc level). \star/
    for (depth = 0; depth < topodepth; depth++) {</pre>
        printf("*** Objects at level %d\n", depth);
        for (i = 0; i < hwloc_get_nbobjs_by_depth(topology, depth);</pre>
             i++) {
            hwloc_obj_snprintf(string, sizeof(string), topology,
                       hwloc_get_obj_by_depth(topology, depth, i),
                       "#", 0);
            printf("Index %d: %s\n", i, string);
    }
    /\star Walk the topology with a tree style. \star/
    printf("*** Printing overall tree\n");
    print_children(topology, hwloc_get_system_obj(topology), 0);
    /\star Print the number of sockets. \star/
    depth = hwloc_get_type_depth(topology, HWLOC_OBJ_SOCKET);
    if (depth == HWLOC_TYPE_DEPTH_UNKNOWN) {
       printf("*** The number of sockets is unknown\n");
    } else {
        printf("*** %u socket(s)\n",
               hwloc_get_nbobjs_by_depth(topology, depth));
    /* Find out where cores are, or else smaller sets of CPUs if
      the OS doesn't have the notion of a "core". \star/
    depth = hwloc_get_type_or_below_depth(topology, HWLOC_OBJ_CORE);
    /* Get last level. */
    obj = hwloc_get_obj_by_depth(topology, depth,
                   hwloc_get_nbobjs_by_depth(topology, depth) - 1);
    if (obj) {
        /* Get a copy of its cpuset that we may modify. */
        cpuset = hwloc_cpuset_dup(obj->cpuset);
        /* Get only one logical processor (in case the core is
           SMT/hyperthreaded). */
```

1.5 API example

```
hwloc_cpuset_singlify(cpuset);

/* And try to bind ourself there. */
if (hwloc_set_cpubind(topology, cpuset, 0)) {
    char *str;
    hwloc_cpuset_asprintf(&str, obj->cpuset);
    printf("Couldn't bind to cpuset %s\n", str);
    free(str);
}

/* Free our cpuset copy */
hwloc_cpuset_free(cpuset);
}

/* Destroy topology object. */
hwloc_topology_destroy(topology);
return 0;
}
```

hwloc provides a pkg-config executable to obtain relevant compiler and linker flags. For example, it can be used thusly to compile applications that utilize the hwloc library (assuming GNU Make):

```
CFLAGS += $(pkg-config --cflags hwloc)
LDLIBS += $(pkg-config --libs hwloc)
cc hwloc-hello.c $(CFLAGS) -o hwloc-hello $(LDLIBS)
```

On a machine with 4GB of RAM and 2 processor sockets -- each socket of which has two processor cores -- the output from running hwloc-hello could be something like the following:

```
shell$ ./hwloc-hello
*** Objects at level 0
Index 0: System(3938MB)
*** Objects at level 1
Index 0: Socket#0
Index 1: Socket#1
*** Objects at level 2
Index 0: Core#0
Index 1: Core#1
Index 2: Core#3
Index 3: Core#2
*** Objects at level 3
Index 0: P#0
Index 1: P#1
Index 2: P#2
Index 3: P#3
*** Printing overall tree
System(3938MB)

    Core#0
      P#0
    Core#1
      P#1
  Socket#1
    Core#3
     P#2
    Core#2
     P#3
*** 2 socket(s)
shell$
```

8 hwloc

1.6 Questions and bugs

Questions should be sent to the devel mailing list (http://www.open-mpi.org/community/lists/hwloc.php). Bug reports should be reported in the tracker (https://svn.open-mpi.org/trac/hwloc/).

1.7 History / credits

hwloc is the evolution and merger of the libtopology (http://runtime.bordeaux.inria.fr/libtopology/) project and the Portable Linux Processor Affinity (PLPA) (http://www.open-mpi.org/projects/plpa/) project. Because of functional and ideological overlap, these two code bases and ideas were merged and released under the name "hwloc" as an Open MPI sub-project.

INRIA initially developed Runtime libtopology was the Team-Project (http://runtime.bordeaux.inria.fr/) (headed by Raymond Namyst PLPA was initially developed by the Open (http://dept-info.labri.fr/~namyst/). MPI development team as a sub-project. Both are now deprecated in favor of hwloc, which is distributed as an Open MPI sub-project.

1.8 Glossary

Object Interesting kind of part of the system, such as a Core, a Cache, a Memory node, etc. The different types detected by hwloc are detailed in the hwloc_obj_type_t enumeration.

They are topologically sorted by CPU set into a tree whose root is the System object (which always exists).

CPU set The set of logical processors logically included in an object (if any). This term does *not* have any relation to an operating system "CPU set."

Father object The object logically containing the current object, for example because its CPU set includes the CPU set of the current object.

Children object(s) The object (or objects) contained in the current object because their CPU set is included in the CPU set of the current object.

Arity The number of children of an object.

Sibling objects Objects of the same type which have the same father.

Sibling rank Index to uniquely identify objects of the same type which have the same father, and is always in the range [0, fathers_arity).

Cousin objects Objects of the same type as the current object.

Level Set of objects of the same type.

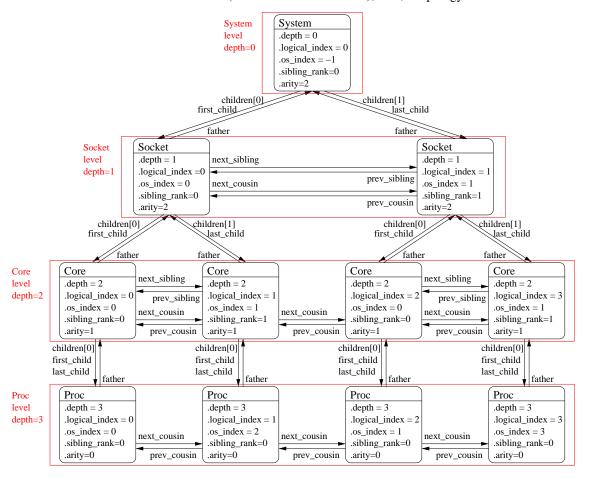

OS index The index that the operating system (OS) uses to identify the object. This may be completely arbitrary, or it may depend on the BIOS configuration.

Depth Nesting level in the object tree, starting from the 0th object (i.e., the System object).

Logical index Index to uniquely identify objects of the same type. It is generally used to express proximity. This index is always linear and in the range [0, num_objs_same_type_same_level). Think of it as "cousin rank."

1.8 Glossary 9

The following diagram can help to understand the vocabulary of the relationships by showing the example of a machine with two dual core sockets (with no hardware threads); thus, a topology with 4 levels.

It should be noted that for Processor objects, the logical index -- as computed linearly by hwloc -- is not the same as the OS index.

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

hwloc_obj_attr_u::hwloc_cache_attr_s (Cache-specific Object Attributes)	53
hwloc_obj_attr_u::hwloc_machine_attr_s (Machine-specific Object Attributes)	54
hwloc_obj_attr_u::hwloc_memory_attr_s (Node-specific Object Attributes)	56
hwloc_obj_attr_u::hwloc_misc_attr_s (Misc-specific Object Attributes)	57
hwloc_obj (Structure of a topology object)	58
hwloc obj attr u (Object type-specific Attributes)	62

14 Data Structure Index

Chapter 4

Module Documentation

4.1 Topology context

Typedefs

 typedef struct hwloc_topology * hwloc_topology_t
 Topology context.

4.1.1 Typedef Documentation

4.1.1.1 typedef struct hwloc_topology_t

Topology context. To be initialized with hwloc_topology_init() and built with hwloc_topology_load().

16 Module Documentation

4.2 Topology Object Types

Defines

• #define HWLOC_TYPE_UNORDERED INT_MAX

Value returned by hwloc_compare_types when types can not be compared.

Enumerations

• enum hwloc_obj_type_t {

HWLOC_OBJ_SYSTEM, HWLOC_OBJ_MACHINE, HWLOC_OBJ_NODE, HWLOC_OBJ_SOCKET,

HWLOC_OBJ_CACHE, HWLOC_OBJ_CORE, HWLOC_OBJ_PROC, HWLOC_OBJ_MISC }

Type of topology object.

Functions

• int hwloc_compare_types (hwloc_obj_type_t type1, hwloc_obj_type_t type2)

Compare the depth of two object types.

4.2.1 Define Documentation

4.2.1.1 #define HWLOC TYPE UNORDERED INT MAX

Value returned by hwloc_compare_types when types can not be compared.

4.2.2 Enumeration Type Documentation

4.2.2.1 enum hwloc_obj_type_t

Type of topology object.

Note:

Enumerator:

HWLOC_OBJ_SYSTEM Whole system (may be a cluster of machines). The whole system that is accessible to hwloc. That may comprise several machines in SSI systems like Kerrighed.

HWLOC_OBJ_MACHINE Machine. A set of processors and memory with cache coherency.

HWLOC_OBJ_NODE NUMA node. A set of processors around memory which the processors can directly access.

HWLOC_OBJ_SOCKET Socket, physical package, or chip. In the physical meaning, i.e. that you can add or remove physically.

HWLOC_OBJ_CACHE Data cache. Can be L1, L2, L3, ...

HWLOC_OBJ_CORE Core. A computation unit (may be shared by several logical processors).

HWLOC_OBJ_PROC (Logical) Processor. An execution unit (may share a core with some other logical processors, e.g. in the case of an SMT core). Objects of this kind are always reported and can thus be used as fallback when others are not.

HWLOC_OBJ_MISC Miscellaneous objects. Objects which do not fit in the above but are detected by hwloc and are useful to take into account for affinity. For instance, some OSes expose their arbitrary processors aggregation this way.

4.2.3 Function Documentation

4.2.3.1 int hwloc_compare_types (hwloc_obj_type_t type1, hwloc_obj_type_t type2)

Compare the depth of two object types. Types shouldn't be compared as they are, since newer ones may be added in the future. This function returns less than, equal to, or greater than zero if type1 is considered to be respectively higher than, equal to, or deeper than type2 in the hierarchy. If the types can not be compared (because it does not make sense), HWLOC_TYPE_UNORDERED is returned. Object types containing CPUs can always be compared.

Note:

HWLOC_OBJ_SYSTEM will always be the highest, and HWLOC_OBJ_PROC will always be the deepest.

18 Module Documentation

4.3 Topology Objects

Data Structures

• struct hwloc_obj

Structure of a topology object.

• union hwloc_obj_attr_u

Object type-specific Attributes.

Typedefs

• typedef struct hwloc_obj * hwloc_obj_t

4.3.1 Typedef Documentation

 $\textbf{4.3.1.1} \quad typedef \ struct \ hwloc_obj* \ hwloc_obj_t$

4.4 Create and Destroy Topologies

Functions

- int hwloc_topology_init (hwloc_topology_t *topologyp)

 Allocate a topology context.
- int hwloc_topology_load (hwloc_topology_t topology)

 Build the actual topology.
- void hwloc_topology_destroy (hwloc_topology_t topology)
 Terminate and free a topology context.
- void hwloc_topology_check (hwloc_topology_t topology)

 Run internal checks on a topology structure.

4.4.1 Function Documentation

4.4.1.1 void hwloc_topology_check (hwloc_topology_t topology)

Run internal checks on a topology structure.

Parameters:

topology is the topology to be checked

4.4.1.2 void hwloc_topology_destroy (hwloc_topology_t topology)

Terminate and free a topology context.

Parameters:

topology is the topology to be freed

$\textbf{4.4.1.3} \quad int \ hwloc_topology_init \ (hwloc_topology_t** \textit{topologyp})$

Allocate a topology context.

Parameters:

 \rightarrow *topologyp* is assigned a pointer to the new allocated context.

Returns:

0 on success, -1 on error.

20 Module Documentation

4.4.1.4 int hwloc_topology_load (hwloc_topology_t topology)

Build the actual topology. Build the actual topology once initialized with hwloc_topology_init() and tuned with hwlocality_configuration routine. No other routine may be called earlier using this topology context.

Parameters:

topology is the topology to be loaded with objects.

Returns:

0 on success, -1 on error.

See also:

Configure Topology Detection

4.5 Configure Topology Detection

Enumerations

• enum hwloc_topology_flags_e { HWLOC_TOPOLOGY_FLAG_WHOLE_SYSTEM = (1<<0), HWLOC_TOPOLOGY_FLAG_IS_THISSYSTEM = (1<<1) }

Flags to be set onto a topology context before load.

Functions

- int hwloc_topology_ignore_type (hwloc_topology_t topology, hwloc_obj_type_t type)

 *Ignore an object type.
- int hwloc_topology_ignore_type_keep_structure (hwloc_topology_t topology, hwloc_obj_type_t type)

Ignore an object type if it does not bring any structure.

- int hwloc_topology_ignore_all_keep_structure (hwloc_topology_t topology)

 Ignore all objects that do not bring any structure.
- int hwloc_topology_set_flags (hwloc_topology_t topology, unsigned long flags)

 Set OR'ed flags to non-yet-loaded topology.
- int hwloc_topology_set_fsroot (hwloc_topology_t restrict topology, const char *restrict fsroot_path)

Change the file-system root path when building the topology from sysfs/procfs.

int hwloc_topology_set_synthetic (hwloc_topology_t restrict topology, const char *restrict description)

Enable synthetic topology.

• int hwloc_topology_set_xml (hwloc_topology_t restrict topology, const char *restrict xmlpath) Enable XML-file based topology.

4.5.1 Detailed Description

These functions can optionally be called between hwloc_topology_load() to configure how the detection should be performed, e.g. to ignore some objects types, define a synthetic topology, etc.

If none of them is called, the default is to detect all the objects of the machine that the caller is allowed to access.

This default behavior may also be modified through environment variables if the application did not modify it already. Setting HWLOC_XMLFILE in the environment enforces the discovery from a XML file as if hwloc_topology_set_xml() had been called. HWLOC_FSROOT switches to reading the topology from the specified Linux filesystem root as if hwloc_topology_set_fsroot() had been called. Finally, HWLOC_THISSYSTEM enforces the value of the is_thissystem field.

22 Module Documentation

4.5.2 Enumeration Type Documentation

4.5.2.1 enum hwloc_topology_flags_e

Flags to be set onto a topology context before load. Flags should be given to hwloc_topology_set_flags().

Enumerator:

HWLOC_TOPOLOGY_FLAG_WHOLE_SYSTEM HWLOC TOPOLOGY FLAG IS THISSYSTEM

4.5.3 Function Documentation

4.5.3.1 int hwloc_topology_ignore_all_keep_structure (hwloc_topology_t topology)

Ignore all objects that do not bring any structure. Ignore all objects that do not bring any structure: Each ignored object should have a single children or be the only child of its father.

4.5.3.2 int hwloc_topology_ignore_type (hwloc_topology_t topology, hwloc_obj_type_t type)

Ignore an object type. Ignore all objects from the given type. The top-level type HWLOC_OBJ_SYSTEM and bottom-level type HWLOC_OBJ_PROC may not be ignored.

4.5.3.3 int hwloc_topology_ignore_type_keep_structure (hwloc_topology_t topology, hwloc_obj_type_t type)

Ignore an object type if it does not bring any structure. Ignore all objects from the given type as long as they do not bring any structure: Each ignored object should have a single children or be the only child of its father. The top-level type HWLOC_OBJ_SYSTEM and bottom-level type HWLOC_OBJ_PROC may not be ignored.

4.5.3.4 int hwloc_topology_set_flags (hwloc_topology_t topology, unsigned long flags)

Set OR'ed flags to non-yet-loaded topology. Set a OR'ed set of hwloc_topology_flags_e onto a topology that was not yet loaded.

4.5.3.5 int hwloc_topology_set_fsroot (hwloc_topology_t restrict *topology*, const char *restrict *fsroot_path*)

Change the file-system root path when building the topology from sysfs/procfs. On Linux system, use sysfs and procfs files as if they were mounted on the given fsroot_path instead of the main file-system root. Setting the environment variable HWLOC_FSROOT may also result in this behavior. Not using the main file-system root causes hwloc_topology_is_thissystem field to return 0.

Note:

For conveniency, this backend provides empty binding hooks which just return success. To have hwloc still actually call OS-specific hooks, the HWLOC_TOPOLOGY_FLAG_IS_THISSYSTEM has to be set to assert that the loaded file is really the underlying system.

4.5.3.6 int hwloc_topology_set_synthetic (hwloc_topology_t restrict *topology*, const char *restrict *description*)

Enable synthetic topology. Gather topology information from the given description which should be a comma separated string of numbers describing the arity of each level. Each number may be prefixed with a type and a colon to enforce the type of a level.

Note:

For conveniency, this backend provides empty binding hooks which just return success.

4.5.3.7 int hwloc_topology_set_xml (hwloc_topology_t restrict *topology*, const char *restrict *xmlpath*)

Enable XML-file based topology. Gather topology information the XML file given at xmlpath. Setting the environment variable HWLOC_XMLFILE may also result in this behavior. This file may have been generated earlier with lstopo file.xml.

Note:

For conveniency, this backend provides empty binding hooks which just return success. To have hwloc still actually call OS-specific hooks, the HWLOC_TOPOLOGY_FLAG_IS_THISSYSTEM has to be set to assert that the loaded file is really the underlying system.

24 Module Documentation

4.6 Get some Topology Information

Defines

#define HWLOC_TYPE_DEPTH_UNKNOWN -1
 No object of given type exists in the topology.

#define HWLOC_TYPE_DEPTH_MULTIPLE -2
 Objects of given type exist at different depth in the topology.

Functions

- unsigned hwloc_topology_get_depth (hwloc_topology_t restrict topology)

 Get the depth of the hierachical tree of objects.
- int hwloc_get_type_depth (hwloc_topology_t topology, hwloc_obj_type_t type)

 Returns the depth of objects of type type.
- hwloc_obj_type_t hwloc_get_depth_type (hwloc_topology_t topology, unsigned depth)

 Returns the type of objects at depth depth.
- unsigned hwloc_get_nbobjs_by_depth (hwloc_topology_t topology, unsigned depth)

 Returns the width of level at depth depth.
- static inline int hwloc_get_nbobjs_by_type (hwloc_topology_t topology, hwloc_obj_type_t type)

 Returns the width of level type type.
- int hwloc_topology_is_thissystem (hwloc_topology_t restrict topology)

 Does the topology context come from this system?

4.6.1 Define Documentation

4.6.1.1 #define HWLOC_TYPE_DEPTH_MULTIPLE -2

Objects of given type exist at different depth in the topology.

4.6.1.2 #define HWLOC_TYPE_DEPTH_UNKNOWN -1

No object of given type exists in the topology.

4.6.2 Function Documentation

4.6.2.1 hwloc_obj_type_t hwloc_get_depth_type (hwloc_topology_t topology, unsigned depth)

Returns the type of objects at depth depth.

4.6.2.2 unsigned hwloc_get_nbobjs_by_depth (hwloc_topology_t topology, unsigned depth)

Returns the width of level at depth depth.

4.6.2.3 static inline int hwloc_get_nbobjs_by_type (hwloc_topology_t topology, hwloc_obj_type_t type) [static]

Returns the width of level type type. If no object for that type exists, 0 is returned. If there are several levels with objects of that type, -1 is returned.

4.6.2.4 int hwloc_get_type_depth (hwloc_topology_t topology, hwloc_obj_type_t type)

Returns the depth of objects of type type. If no object of this type is present on the underlying architecture, or if the OS doesn't provide this kind of information, the function returns HWLOC_TYPE_DEPTH_UNKNOWN.

If type is absent but a similar type is acceptable, see also hwloc_get_type_or_below_depth() and hwloc_get_type_or_above_depth().

4.6.2.5 unsigned hwloc_topology_get_depth (hwloc_topology_t restrict topology)

Get the depth of the hierarchical tree of objects. This is the depth of HWLOC_OBJ_PROC objects plus one.

4.6.2.6 int hwloc_topology_is_thissystem (hwloc_topology_t restrict topology)

Does the topology context come from this system?

Returns:

- 1 if this topology context was built using the system running this program.
- 0 instead (for instance if using another file-system root, a XML topology file, or a synthetic topology).

26 Module Documentation

4.7 Retrieve Objects

Functions

• hwloc_obj_t hwloc_get_obj_by_depth (hwloc_topology_t topology, unsigned depth, unsigned idx)

Returns the topology object at index index from depth depth.

• static inline hwloc_obj_t hwloc_get_obj_by_type (hwloc_topology_t topology, hwloc_obj_type_t type, unsigned idx)

Returns the topology object at index index with type type.

4.7.1 Function Documentation

4.7.1.1 hwloc_obj_t hwloc_get_obj_by_depth (hwloc_topology_t *topology*, unsigned *depth*, unsigned *idx*)

Returns the topology object at index index from depth depth.

4.7.1.2 static inline hwloc_obj_t hwloc_get_obj_by_type (hwloc_topology_t *topology*, hwloc_obj_type_t *type*, unsigned *idx*) [static]

Returns the topology object at index index with type type. If no object for that type exists, NULL is returned. If there are several levels with objects of that type, NULL is returned and ther caller may fallback to hwloc_get_obj_by_depth().

4.8 Object/String Conversion

Functions

- const char * hwloc_obj_type_string (hwloc_obj_type_t type)

 Return a stringified topology object type.
- hwloc_obj_type_t hwloc_obj_type_of_string (const char *string)

 Return an object type from the string.
- int hwloc_obj_snprintf (char *restrict string, size_t size, hwloc_topology_t topology, hwloc_obj_t obj, const char *restrict indexprefix, int verbose)

Stringify a given topology object into a human-readable form.

• int hwloc_obj_cpuset_snprintf (char *restrict str, size_t size, size_t nobj, const hwloc_obj_t *restrict objs)

Stringify the cpuset containing a set of objects.

4.8.1 Function Documentation

4.8.1.1 int hwloc_obj_cpuset_snprintf (char *restrict str, size_t size, size_t nobj, const hwloc_obj_t *restrict objs)

Stringify the cpuset containing a set of objects.

Returns:

how many characters were actually written (not including the ending $\setminus 0$).

4.8.1.2 int hwloc_obj_snprintf (char *restrict string, size_t size, hwloc_topology_t topology, hwloc_obj_t obj, const char *restrict indexprefix, int verbose)

Stringify a given topology object into a human-readable form. Fill string string up to size characters with the description of topology object obj in topology topology.

If verbose is set, a longer description is used. Otherwise a short description is used.

indexprefix is used to prefix the os_index attribute number of the object in the description. If NULL, the # character is used.

Returns:

how many characters were actually written (not including the ending $\setminus 0$).

4.8.1.3 hwloc_obj_type_t hwloc_obj_type_of_string (const char * string)

Return an object type from the string.

4.8.1.4 const char* hwloc_obj_type_string (hwloc_obj_type_t type)

Return a stringified topology object type.

4.9 Binding

Enumerations

• enum hwloc_cpubind_policy_t { HWLOC_CPUBIND_PROCESS = (1<<0), HWLOC_-CPUBIND_THREAD = (1<<1), HWLOC_CPUBIND_STRICT = (1<<2) }

Process/Thread binding policy.

Functions

- int hwloc_set_cpubind (hwloc_topology_t topology, const hwloc_cpuset_t set, int policy)

 Bind current process or thread on cpus given in cpuset set.
- int hwloc_set_proc_cpubind (hwloc_topology_t topology, hwloc_pid_t pid, const hwloc_cpuset_t set, int policy)

Bind a process pid on cpus given in cpuset set.

int hwloc_set_thread_cpubind (hwloc_topology_t topology, hwloc_thread_t tid, const hwloc_cpuset_t set, int policy)

Bind a thread tid on cpus given in cpuset set.

4.9.1 Detailed Description

It is often useful to call hwloc_cpuset_singlify() first so that a single CPU remains in the set. This way, the process will not even migrate between different CPUs. Some OSes also only support that kind of binding.

Note:

Some OSes do not provide all ways to bind processes, threads, etc and the corresponding binding functions may fail. ENOSYS is returned when it is not possible to bind the requested kind of object processes/threads). EXDEV is returned when the requested cpuset can not be enforced (e.g. some systems only allow one CPU, and some other systems only allow one NUMA node)

The most portable version that should be preferred over the others, whenever possible, is

```
hwloc_set_cpubind(topology, set, 0),
```

as it just binds the current program, assuming it is monothread, or

```
\verb|hwloc_set_cpub| ind (topology, set, HWLOC_CPUBIND_THREAD)|,
```

which binds the current thread of the current program (which may be multithreaded).

Note:

To unbind, just call the binding function with either a full cpuset or a cpuset equal to the system cpuset.

4.9 Binding 29

4.9.2 Enumeration Type Documentation

4.9.2.1 enum hwloc_cpubind_policy_t

Process/Thread binding policy. These flags can be used to refine the binding policy.

The default (0) is to bind the current process, assumed to be mono-thread, in a non-strict way. This is the most portable way to bind as all OSes usually provide it.

Enumerator:

HWLOC_CPUBIND_PROCESS Bind all threads of the current multithreaded process. This may not be supported by some OSes (e.g. Linux).

HWLOC_CPUBIND_THREAD Bind current thread of current process.

HWLOC_CPUBIND_STRICT Request for strict binding from the OS. By default, when the designated CPUs are all busy while other CPUs are idle, OSes may execute the thread/process on those other CPUs instead of the designated CPUs, to let them progress anyway. Strict binding means that the thread/process will _never_ execute on other cpus than the designated CPUs, even when those are busy with other tasks and other CPUs are idle.

Note:

Depending on OSes and implementations, strict binding may not be possible (implementation reason) or not allowed (administrative reasons), and the function will fail in that case.

4.9.3 Function Documentation

4.9.3.1 int hwloc_set_cpubind (hwloc_topology_t topology, const hwloc_cpuset_t set, int policy)

Bind current process or thread on cpus given in cpuset set.

4.9.3.2 int hwloc_set_proc_cpubind (hwloc_topology_t topology, hwloc_pid_t pid, const hwloc_cpuset_t set, int policy)

Bind a process pid on cpus given in cpuset set.

Note:

hwloc_pid_t is pid_t on unix platforms, and HANDLE on native Windows platforms HWLOC_CPUBIND_THREAD can not be used in policy.

4.9.3.3 int hwloc_set_thread_cpubind (hwloc_topology_t topology, hwloc_thread_t tid, const hwloc_cpuset_t set, int policy)

Bind a thread tid on cpus given in cpuset set.

Note:

hwloc_thread_t is pthread_t on unix platforms, and HANDLE on native Windows platforms HWLOC_CPUBIND_PROCESS can not be used in policy.

4.10 Object Type Helpers

Functions

• static inline unsigned hwloc_get_type_or_below_depth (hwloc_topology_t topology, hwloc_obj_-type_t type)

Returns the depth of objects of type type or below.

• static inline unsigned hwloc_get_type_or_above_depth (hwloc_topology_t topology, hwloc_obj_-type_t type)

Returns the depth of objects of type type or above.

4.10.1 Function Documentation

4.10.1.1 static inline unsigned hwloc_get_type_or_above_depth (hwloc_topology_t topology, hwloc_obj_type_t type) [static]

Returns the depth of objects of type type or above. If no object of this type is present on the underlying architecture, the function returns the depth of the first "present" object typically containing type.

4.10.1.2 static inline unsigned hwloc_get_type_or_below_depth (hwloc_topology_t topology, hwloc_obj_type_t type) [static]

Returns the depth of objects of type type or below. If no object of this type is present on the underlying architecture, the function returns the depth of the first "present" object typically found inside type.

4.11 Basic Traversal Helpers

Functions

- static inline hwloc_obj_t hwloc_get_system_obj (hwloc_topology_t topology)

 Returns the top-object of the topology-tree. Its type is HWLOC_OBJ_SYSTEM.
- static inline hwloc_obj_t hwloc_get_next_obj_by_depth (hwloc_topology_t topology, unsigned depth, hwloc_obj_t prev)

Returns the next object at depth depth.

• static inline hwloc_obj_t hwloc_get_next_obj_by_type (hwloc_topology_t topology, hwloc_obj_type_t type, hwloc_obj_t prev)

Returns the next object of type type.

• static inline hwloc_obj_t hwloc_get_next_child (hwloc_topology_t topology, hwloc_obj_t father, hwloc_obj_t prev)

Return the next child.

• static inline hwloc_obj_t hwloc_get_common_ancestor_obj (hwloc_topology_t topology, hwloc_obj_t obj1, hwloc_obj_t obj2)

Returns the common father object to objects lvl1 and lvl2.

static inline int hwloc_obj_is_in_subtree (hwloc_topology_t topology, hwloc_obj_t obj, hwloc_obj_t subtree_root)

Returns true if _obj_ is inside the subtree beginning with subtree_root.

4.11.1 Function Documentation

4.11.1.1 static inline hwloc_obj_t hwloc_get_common_ancestor_obj (hwloc_topology_t topology, hwloc_obj_t obj1, hwloc_obj_t obj2) [static]

Returns the common father object to objects lvl1 and lvl2.

4.11.1.2 static inline hwloc_obj_t hwloc_get_next_child (hwloc_topology_t topology, hwloc_obj_t father, hwloc_obj_t prev) [static]

Return the next child. If prev is NULL, return the first child.

4.11.1.3 static inline hwloc_obj_t hwloc_get_next_obj_by_depth (hwloc_topology_t topology, unsigned depth, hwloc_obj_t prev) [static]

Returns the next object at depth depth. If prev is NULL, return the first object at depth depth.

4.11.1.4 static inline hwloc_obj_t hwloc_get_next_obj_by_type (hwloc_topology_t topology, hwloc_obj_type_t type, hwloc_obj_t prev) [static]

Returns the next object of type type. If prev is NULL, return the first object at type type. If there are multiple or no depth for given type, return NULL and let the caller fallback to hwloc_get_next_obj_by_depth().

4.11.1.5 static inline hwloc_obj_t hwloc_get_system_obj (hwloc_topology_t topology) [static]

Returns the top-object of the topology-tree. Its type is HWLOC_OBJ_SYSTEM.

4.11.1.6 static inline int hwloc_obj_is_in_subtree (hwloc_topology_t topology, hwloc_obj_t obj, hwloc_obj_t subtree_root) [static]

Returns true if _obj_ is inside the subtree beginning with subtree_root.

4.12 Finding Objects Inside a CPU set

Functions

• int hwloc_get_largest_objs_inside_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_t *restrict objs, int max)

Get the set of largest objects covering exactly a given cpuset set.

• static inline hwloc_obj_t hwloc_get_next_obj_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, hwloc_obj_t prev)

Return the next object at depth depth included in CPU set set.

• static inline hwloc_obj_t hwloc_get_next_obj_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, hwloc_obj_t prev)

Return the next object of type type included in CPU set set.

• static inline hwloc_obj_t hwloc_get_obj_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, unsigned idx)

Return the index -th object at depth depth included in CPU set set.

• static inline hwloc_obj_t hwloc_get_obj_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, unsigned idx)

Return the idx-th object of type type included in CPU set set.

• static inline unsigned hwloc_get_nbobjs_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth)

Return the number of objects at depth depth included in CPU set set.

• static inline int hwloc_get_nbobjs_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type)

Return the number of objects of type type included in CPU set set.

4.12.1 Function Documentation

4.12.1.1 int hwloc_get_largest_objs_inside_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_t *restrict objs, int max)

Get the set of largest objects covering exactly a given cpuset set.

Returns:

the number of objects returned in objs.

4.12.1.2 static inline unsigned hwloc_get_nbobjs_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth) [static]

Return the number of objects at depth depth included in CPU set set.

4.12.1.3 static inline int hwloc_get_nbobjs_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type) [static]

Return the number of objects of type type included in CPU set set. If no object for that type exists inside CPU set set, 0 is returned. If there are several levels with objects of that type inside CPU set set, -1 is returned.

4.12.1.4 static inline hwloc_obj_t hwloc_get_next_obj_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, hwloc_obj_t prev) [static]

Return the next object at depth depth included in CPU set set. If prev is NULL, return the first object at depth depth included in set. The next invokation should pass the previous return value in prev so as to obtain the next object in set.

4.12.1.5 static inline hwloc_obj_t hwloc_get_next_obj_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, hwloc_obj_t prev) [static]

Return the next object of type type included in CPU set set. If there are multiple or no depth for given type, return NULL and let the caller fallback to hwloc_get_next_obj_inside_cpuset_by_depth().

4.12.1.6 static inline hwloc_obj_t hwloc_get_obj_inside_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, unsigned idx) [static]

Return the index -th object at depth depth included in CPU set set.

4.12.1.7 static inline hwloc_obj_t hwloc_get_obj_inside_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, unsigned idx) [static]

Return the idx -th object of type type included in CPU set set. If there are multiple or no depth for given type, return NULL and let the caller fallback to hwloc get obj inside cpuset by depth().

4.13 Finding a single Object covering at least CPU set

Functions

• static inline hwloc_obj_t hwloc_get_child_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_t father)

Get the child covering at least CPU set set.

• static inline hwloc_obj_t hwloc_get_obj_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set)

Get the lowest object covering at least CPU set set.

4.13.1 Function Documentation

4.13.1.1 static inline hwloc_obj_t hwloc_get_child_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_t father) [static]

Get the child covering at least CPU set set.

Returns:

NULL if no child matches.

4.13.1.2 static inline hwloc_obj_t hwloc_get_obj_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set) [static]

Get the lowest object covering at least CPU set set.

Returns:

NULL if no object matches.

4.14 Finding a set of similar Objects covering at least a CPU set

Functions

• static inline hwloc_obj_t hwloc_get_next_obj_covering_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, hwloc_obj_t prev)

Iterate through same-depth objects covering at least CPU set set.

• static inline hwloc_obj_t hwloc_get_next_obj_covering_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, hwloc_obj_t prev)

Iterate through same-type objects covering at least CPU set set.

4.14.1 Function Documentation

4.14.1.1 static inline hwloc_obj_t hwloc_get_next_obj_covering_cpuset_by_depth (hwloc_topology_t topology, hwloc_cpuset_t set, unsigned depth, hwloc_obj_t prev) [static]

Iterate through same-depth objects covering at least CPU set set. If object prev is NULL, return the first object at depth depth covering at least part of CPU set set. The next invokation should pass the previous return value in prev so as to obtain the next object covering at least another part of set.

4.14.1.2 static inline hwloc_obj_t hwloc_get_next_obj_covering_cpuset_by_type (hwloc_topology_t topology, hwloc_cpuset_t set, hwloc_obj_type_t type, hwloc_obj_t prev) [static]

Iterate through same-type objects covering at least CPU set set. If object prev is NULL, return the first object of type type covering at least part of CPU set set. The next invokation should pass the previous return value in prev so as to obtain the next object of type type covering at least another part of set.

If there are no or multiple depths for type type, NULL is returned. The caller may fallback to $hwloc_get_next_obj_covering_cpuset_by_depth()$ for each depth.

4.15 Cache-specific Finding Helpers

Functions

• static inline hwloc_obj_t hwloc_get_cache_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set)

Get the first cache covering a cpuset set.

• static inline hwloc_obj_t hwloc_get_shared_cache_covering_obj (hwloc_topology_t topology, hwloc_obj_t obj)

Get the first cache shared between an object and somebody else.

4.15.1 Function Documentation

4.15.1.1 static inline hwloc_obj_t hwloc_get_cache_covering_cpuset (hwloc_topology_t topology, hwloc_cpuset_t set) [static]

Get the first cache covering a cpuset set.

Returns:

NULL if no cache matches

4.15.1.2 static inline hwloc_obj_t hwloc_get_shared_cache_covering_obj (hwloc_topology_t topology, hwloc_obj_t obj) [static]

Get the first cache shared between an object and somebody else.

Returns:

NULL if no cache matches

4.16 Advanced Traversal Helpers

Functions

• int hwloc_get_closest_objs (hwloc_topology_t topology, hwloc_obj_t src, hwloc_obj_t *restrict objs, int max)

Do a depth-first traversal of the topology to find and sort.

4.16.1 Function Documentation

4.16.1.1 int hwloc_get_closest_objs (hwloc_topology_t topology, hwloc_obj_t src, hwloc_obj_t *restrict objs, int max)

Do a depth-first traversal of the topology to find and sort. all objects that are at the same depth than src. Report in objs up to max physically closest ones to src.

Returns:

the number of objects returned in objs.

4.17 Binding Helpers

Functions

• static inline void hwloc_distribute (hwloc_topology_t topology, hwloc_obj_t root, hwloc_cpuset_t *cpuset, int n)

Distribute n items over the topology under root.

4.17.1 Function Documentation

4.17.1.1 static inline void hwloc_distribute (hwloc_topology_t topology, hwloc_obj_t root, hwloc_cpuset_t * cpuset, int n) [static]

Distribute n items over the topology under root. Array cpuset will be filled with n cpusets distributed linearly over the topology under root.

This is typically useful when an application wants to distribute n threads over a machine, giving each of them as much private cache as possible and keeping them locally in number order.

The caller may typicall want to additionally call https://http

4.18 The Cpuset API

Defines

• #define hwloc_cpuset_foreach_begin(cpu, set)

Loop macro iterating on CPU set set.

• #define hwloc_cpuset_foreach_end() } End of loop.

Typedefs

- typedef struct hwloc_cpuset_s * hwloc_cpuset_t

 Set of CPUs represented as an opaque pointer to an internal bitmask.
- typedef struct hwloc_cpuset_s * hwloc_const_cpuset_t

Functions

- hwloc_cpuset_t hwloc_cpuset_alloc (void)
 Allocate a new empty CPU set.
- void hwloc_cpuset_free (hwloc_cpuset_t set)
 Free CPU set set.
- hwloc_cpuset_t hwloc_cpuset_dup (hwloc_cpuset_t set)

 Duplicate CPU set set by allocating a new CPU set and copying its contents.
- void hwloc_cpuset_copy (hwloc_cpuset_t dst, hwloc_cpuset_t src)

 Copy the contents of CPU set src into the already allocated CPU set dst.
- int hwloc_cpuset_snprintf (char *restrict buf, size_t buflen, hwloc_const_cpuset_t set) Stringify a cpuset.
- int hwloc_cpuset_asprintf (char **strp, hwloc_const_cpuset_t set)

 Stringify a cpuset into a newly allocated string.
- hwloc_cpuset_t hwloc_cpuset_from_string (const char *restrict string)

 Parse a cpuset string.
- void hwloc_cpuset_zero (hwloc_cpuset_t set)

 Primitives & macros for building, modifying and consulting "sets" of cpus.
- void hwloc_cpuset_fill (hwloc_cpuset_t set) Fill CPU set set.
- void hwloc_cpuset_from_ulong (hwloc_cpuset_t set, unsigned long mask)

 Setup CPU set set from unsigned long mask.

```
• void hwloc_cpuset_from_ith_ulong (hwloc_cpuset_t set, int i, unsigned long mask)

Setup CPU set set from unsigned long mask used as i -th subset.
```

- unsigned long hwloc_cpuset_to_ulong (hwloc_const_cpuset_t set)

 Convert the beginning part of CPU set set into unsigned long mask.
- unsigned long hwloc_cpuset_to_ith_ulong (hwloc_const_cpuset_t set, int i)

 Convert the i -th subset of CPU set set into unsigned long mask.
- void hwloc_cpuset_cpu (hwloc_cpuset_t set, unsigned cpu)

 Clear CPU set set and set CPU cpu.
- void hwloc_cpuset_all_but_cpu (hwloc_cpuset_t set, unsigned cpu)

 Clear CPU set set and set all but the CPU cpu.
- void hwloc_cpuset_set (hwloc_cpuset_t set, unsigned cpu)

 Add CPU cpu in CPU set set.
- void hwloc_cpuset_set_range (hwloc_cpuset_t set, unsigned begincpu, unsigned endcpu)

 Add CPUs from begincpu to endcpu in CPU set set.
- void hwloc_cpuset_clr (hwloc_cpuset_t set, unsigned cpu)

 *Remove CPU cpu from CPU set set.
- int hwloc_cpuset_isset (hwloc_const_cpuset_t set, unsigned cpu)

 Test whether CPU cpu is part of set set.
- int hwloc_cpuset_iszero (hwloc_const_cpuset_t set)

 Test whether set set is zero.
- int hwloc_cpuset_isfull (hwloc_const_cpuset_t set)

 Test whether set set is full.
- int hwloc_cpuset_isequal (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

 Test whether set set1 is equal to set set2.
- int hwloc_cpuset_intersects (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

 Test whether sets set1 and set2 intersects.
- int hwloc_cpuset_isincluded (hwloc_const_cpuset_t sub_set, hwloc_const_cpuset_t super_set)

 Test whether set sub_set is part of set super_set.
- void hwloc_cpuset_orset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

 Or set modifier_set into set set.
- void hwloc_cpuset_andset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

 And set modifier_set into set set.
- void hwloc_cpuset_clearset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

Clear set modifier_set out of set set.

• void hwloc_cpuset_xorset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

Xor set set with set modifier_set.

• int hwloc_cpuset_first (hwloc_const_cpuset_t set)

Compute the first CPU (least significant bit) in CPU set set.

• int hwloc_cpuset_last (hwloc_const_cpuset_t set)

Compute the last CPU (most significant bit) in CPU set set.

• void hwloc_cpuset_singlify (hwloc_cpuset_t set)

Keep a single CPU among those set in CPU set set.

- int hwloc_cpuset_compar_first (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

 Compar CPU sets set1 and set2 using their first set bit.
- int hwloc_cpuset_compar (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

 Compar CPU sets set1 and set2 using their last bits.
- int hwloc_cpuset_weight (hwloc_const_cpuset_t set)

 Compute the weight of CPU set set.

4.18.1 Detailed Description

For use in hwloc itself, a hwloc_cpuset_t represents a set of logical processors.

Note:

cpusets are indexed by OS logical processor number.

4.18.2 Define Documentation

4.18.2.1 #define hwloc_cpuset_foreach_begin(cpu, set)

Value:

Loop macro iterating on CPU set set. It yields on each cpu that is member of the set. It uses variables set (the cpu set) and cpu (the loop variable)

4.18.2.2 #define hwloc_cpuset_foreach_end() }

End of loop.

See also:

hwloc_cpuset_foreach_begin

4.18 The Cpuset API

4.18.3 Typedef Documentation

4.18.3.1 typedef struct hwloc_cpuset_s* hwloc_const_cpuset_t

4.18.3.2 typedef struct hwloc_cpuset_s* hwloc_cpuset_t

Set of CPUs represented as an opaque pointer to an internal bitmask.

4.18.4 Function Documentation

4.18.4.1 void hwloc_cpuset_all_but_cpu (hwloc_cpuset_t set, unsigned cpu)

Clear CPU set set and set all but the CPU cpu.

4.18.4.2 hwloc_cpuset_t hwloc_cpuset_alloc (void)

Allocate a new empty CPU set.

4.18.4.3 void hwloc_cpuset_andset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

And set modifier_set into set set.

4.18.4.4 int hwloc_cpuset_asprintf (char ** strp, hwloc_const_cpuset_t set)

Stringify a cpuset into a newly allocated string.

Returns:

the number of character that were actually written (not including the ending $\setminus 0$).

4.18.4.5 void hwloc_cpuset_clearset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

Clear set modifier_set out of set set.

4.18.4.6 void hwloc_cpuset_clr (hwloc_cpuset_t set, unsigned cpu)

Remove CPU cpu from CPU set set.

4.18.4.7 int hwloc_cpuset_compar (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

Compar CPU sets set1 and set2 using their last bits. Higher most significant bit is higher. The empty CPU set is considered lower than anything.

4.18.4.8 int hwloc_cpuset_compar_first (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

Compar CPU sets set1 and set2 using their first set bit. Smaller least significant bit is smaller. The empty CPU set is considered higher than anything.

4.18.4.9 void hwloc_cpuset_copy (hwloc_cpuset_t dst, hwloc_cpuset_t src)

Copy the contents of CPU set src into the already allocated CPU set dst.

4.18.4.10 void hwloc_cpuset_cpu (hwloc_cpuset_t set, unsigned cpu)

Clear CPU set set and set CPU cpu.

4.18.4.11 hwloc_cpuset_t hwloc_cpuset_dup (hwloc_cpuset_t set)

Duplicate CPU set set by allocating a new CPU set and copying its contents.

4.18.4.12 void hwloc cpuset fill (hwloc cpuset t set)

Fill CPU set set.

4.18.4.13 int hwloc_cpuset_first (hwloc_const_cpuset_t set)

Compute the first CPU (least significant bit) in CPU set set.

4.18.4.14 void hwloc_cpuset_free (hwloc_cpuset_t set)

Free CPU set set.

4.18.4.15 void hwloc_cpuset_from_ith_ulong (hwloc_cpuset_t set, int i, unsigned long mask)

Setup CPU set set from unsigned long mask used as i -th subset.

4.18.4.16 hwloc_cpuset_t hwloc_cpuset_from_string (const char *restrict string)

Parse a cpuset string. Must start and end with a digit.

4.18.4.17 void hwloc_cpuset_from_ulong (hwloc_cpuset_t set, unsigned long mask)

Setup CPU set set from unsigned long mask.

4.18.4.18 int hwloc_cpuset_intersects (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

Test whether sets set1 and set2 intersects.

4.18.4.19 int hwloc_cpuset_isequal (hwloc_const_cpuset_t set1, hwloc_const_cpuset_t set2)

Test whether set set1 is equal to set set2.

4.18 The Cpuset API 45

4.18.4.20 int hwloc_cpuset_isfull (hwloc_const_cpuset_t set)

Test whether set set is full.

4.18.4.21 int hwloc_cpuset_isincluded (hwloc_const_cpuset_t *sub_set*, hwloc_const_cpuset_t *super_set*)

Test whether set sub_set is part of set super_set.

4.18.4.22 int hwloc_cpuset_isset (hwloc_const_cpuset_t set, unsigned cpu)

Test whether CPU cpu is part of set set.

4.18.4.23 int hwloc_cpuset_iszero (hwloc_const_cpuset_t set)

Test whether set set is zero.

4.18.4.24 int hwloc_cpuset_last (hwloc_const_cpuset_t set)

Compute the last CPU (most significant bit) in CPU set set.

4.18.4.25 void hwloc_cpuset_orset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

Or set modifier_set into set set.

4.18.4.26 void hwloc_cpuset_set (hwloc_cpuset_t set, unsigned cpu)

Add CPU cpu in CPU set set.

4.18.4.27 void hwloc_cpuset_set_range (hwloc_cpuset_t set, unsigned begincpu, unsigned endcpu)

Add CPUs from begincpu to endcpu in CPU set set.

4.18.4.28 void hwloc_cpuset_singlify (hwloc_cpuset_t set)

Keep a single CPU among those set in CPU set set. Might be used before binding so that the process does not have a chance of migrating between multiple logical CPUs in the original mask.

4.18.4.29 int hwloc_cpuset_snprintf (char *restrict buf, size_t buflen, hwloc_const_cpuset_t set)

Stringify a cpuset. Up to buflen characters may be written in buffer buf.

Returns:

the number of character that were actually written if not truncating, or that would have been written (not including the ending $\setminus 0$).

4.18.4.30 unsigned long hwloc_cpuset_to_ith_ulong (hwloc_const_cpuset_t set, int i)

Convert the $\mbox{$\tt i$}$ -th subset of CPU set $\mbox{{\tt set}}$ into unsigned long mask.

4.18.4.31 unsigned long hwloc_cpuset_to_ulong (hwloc_const_cpuset_t set)

Convert the beginning part of CPU set set into unsigned long mask.

4.18.4.32 int hwloc_cpuset_weight (hwloc_const_cpuset_t set)

Compute the weight of CPU set set.

4.18.4.33 void hwloc_cpuset_xorset (hwloc_cpuset_t set, hwloc_const_cpuset_t modifier_set)

Xor set set with set modifier_set.

4.18.4.34 void hwloc_cpuset_zero (hwloc_cpuset_t set)

Primitives & macros for building, modifying and consulting "sets" of cpus. Empty CPU set set

4.19 Helpers for manipulating glibc sched affinity

Functions

• static inline void hwloc_cpuset_to_glibc_sched_affinity (hwloc_topology_t topology, hwloc_cpuset_t hwlocset, cpu_set_t *schedset, size_t schedsetsize)

Convert hwloc CPU set toposet into glibc sched affinity CPU set schedset.

• static inline hwloc_cpuset_t hwloc_cpuset_from_glibc_sched_affinity (hwloc_topology_t topology, const cpu_set_t *schedset, size_t schedsetsize)

Convert glibc sched affinity CPU set schedset into hwloc CPU set.

4.19.1 Function Documentation

4.19.1.1 static inline hwloc_cpuset_t hwloc_cpuset_from_glibc_sched_affinity (hwloc_topology_t topology, const cpu_set_t * schedset, size_t schedsetsize) [static]

Convert glibc sched affinity CPU set schedset into hwloc CPU set. This function may be used before calling sched setaffinity or any other function that takes a cpu set t as input parameter.

 $\verb|schedsetsize| should be size of (cpu_set_t) unless \verb|schedset| was dynamically allocated with CPU_-ALLOC|$

4.19.1.2 static inline void hwloc_cpuset_to_glibc_sched_affinity (hwloc_topology_t topology, hwloc_cpuset_t hwlocset, cpu_set_t * schedset, size_t schedsetsize) [static]

Convert hwloc CPU set toposet into glibc sched affinity CPU set schedset. This function may be used before calling sched_setaffinity or any other function that takes a cpu_set_t as input parameter.

 $\verb|schedsetsize| should be size of (cpu_set_t) unless \verb|schedset| was dynamically allocated with CPU_-ALLOC|$

4.20 Helpers for manipulating linux kernel cpumap files

Functions

• hwloc_cpuset_t hwloc_linux_parse_cpumap_file (FILE *file)

Convert a linux kernel cpumap file file into hwloc CPU set.

4.20.1 Function Documentation

$\textbf{4.20.1.1} \quad hwloc_cpuset_t \ hwloc_linux_parse_cpumap_file \ (FILE * \textit{file})$

Convert a linux kernel cpumap file file into hwloc CPU set. Might be used when reading CPU set from sysfs attributes such as topology and caches for processors, or local_cpus for devices.

4.21 Helpers for manipulating Linux libnuma unsigned long masks

Functions

• static inline void hwloc_cpuset_to_linux_libnuma_ulongs (hwloc_topology_t topology, hwloc_cpuset_t cpuset, unsigned long *mask, unsigned long *maxnode)

Convert hwloc CPU set cpuset into the array of unsigned long mask.

• static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_ulongs (hwloc_topology_t topology, const unsigned long *mask, unsigned long maxnode)

Convert the array of unsigned long mask into hwloc CPU set.

4.21.1 Function Documentation

4.21.1.1 static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_ulongs (hwloc_topology_t topology, const unsigned long * mask, unsigned long maxnode) [static]

Convert the array of unsigned long mask into hwloc CPU set. mask is a array of unsigned long that will be read. maxnode contains the maximal node number that may be read in mask.

This function may be used after calling get_mempolicy or any other function that takes an array of unsigned long as output parameter (and possibly a maximal node number as input parameter).

4.21.1.2 static inline void hwloc_cpuset_to_linux_libnuma_ulongs (hwloc_topology_t topology, hwloc_cpuset_t cpuset, unsigned long * mask, unsigned long * maxnode) [static]

Convert hwloc CPU set cpuset into the array of unsigned long mask. mask is the array of unsigned long that will be filled. maxnode contains the maximal node number that may be stored in mask. maxnode will be set to the maximal node number that was found, plus one.

This function may be used before calling set_mempolicy, mbind, migrate_pages or any other function that takes an array of unsigned long and a maximal node number as input parameter.

4.22 Helpers for manipulating Linux libnuma bitmask

Functions

• static inline struct bitmask * hwloc_cpuset_to_linux_libnuma_bitmask (hwloc_topology_t topology, hwloc_cpuset_t cpuset)

Convert hwloc CPU set cpuset into the returned libnuma bitmask.

• static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_bitmask (hwloc_topology_t topology, const struct bitmask *bitmask)

Convert libnuma bitmask bitmask into hwloc CPU set cpuset.

4.22.1 Function Documentation

4.22.1.1 static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_bitmask (hwloc_topology_t topology, const struct bitmask * bitmask) [static]

Convert libnuma bitmask bitmask into hwloc CPU set cpuset. This function may be used after calling many numa functions that use a struct bitmask as an output parameter.

4.22.1.2 static inline struct bitmask* hwloc_cpuset_to_linux_libnuma_bitmask (hwloc_topology_t topology, hwloc_cpuset_t cpuset) [static, read]

Convert hwloc CPU set cpuset into the returned libnuma bitmask. The returned bitmask should later be freed with numa_bitmask_free.

This function may be used before calling many numa_ functions that use a struct bitmask as an input parameter.

4.23 Helpers for manipulating Linux libnuma nodemask_t

Functions

static inline void hwloc_cpuset_to_linux_libnuma_nodemask (hwloc_topology_t topology, hwloc_cpuset_t cpuset, nodemask_t *nodemask)

Convert hwloc CPU set cpuset into libnuma nodemask nodemask.

• static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_nodemask (hwloc_topology_t topology, const nodemask_t *nodemask)

Convert libnuma nodemask nodemask into hwloc CPU set cpuset.

4.23.1 Function Documentation

4.23.1.1 static inline hwloc_cpuset_t hwloc_cpuset_from_linux_libnuma_nodemask (hwloc_topology_t topology, const nodemask_t * nodemask) [static]

Convert libnuma nodemask nodemask into hwloc CPU set cpuset. This function may be used before calling some old libnuma functions that use a nodemask t as an output parameter.

4.23.1.2 static inline void hwloc_cpuset_to_linux_libnuma_nodemask (hwloc_topology_t topology, hwloc_cpuset_t cpuset, nodemask_t * nodemask) [static]

Convert hwloc CPU set cpuset into libnuma nodemask nodemask. This function may be used before calling some old libnuma functions that use a nodemask_t as an input parameter.

4.24 OpenFabrics-Specific Functions

Functions

• static inline hwloc_cpuset_t hwloc_ibv_get_device_cpuset (struct ibv_device *ibdev)

Get the CPU set of logical processors that are physically close to device ibdev.

4.24.1 Function Documentation

4.24.1.1 static inline hwloc_cpuset_t hwloc_ibv_get_device_cpuset (struct ibv_device * *ibdev*) [static]

Get the CPU set of logical processors that are physically close to device <code>ibdev</code>. For the given OpenFabrics device <code>ibdev</code>, read the corresponding kernel-provided cpumap file and return the corresponding CPU set. This function is currently only implemented in a meaningful way for Linux; other systems will simply get a full cpuset.

Chapter 5

Data Structure Documentation

5.1 hwloc_obj_attr_u::hwloc_cache_attr_s Struct Reference

Cache-specific Object Attributes.

#include <hwloc.h>

Data Fields

- unsigned long memory_kB Size of cache.
- unsigned depth

 Depth of cache.

5.1.1 Detailed Description

Cache-specific Object Attributes.

5.1.2 Field Documentation

5.1.2.1 unsigned hwloc_obj_attr_u::hwloc_cache_attr_s::depth

Depth of cache.

5.1.2.2 unsigned long hwloc_obj_attr_u::hwloc_cache_attr_s::memory_kB

Size of cache.

The documentation for this struct was generated from the following file:

5.2 hwloc_obj_attr_u::hwloc_machine_attr_s Struct Reference

Machine-specific Object Attributes.

```
#include <hwloc.h>
```

Data Fields

- char * dmi_board_vendor DMI board vendor name.
- char * dmi_board_name

 DMI board model name.
- unsigned long memory_kB Size of memory node.
- unsigned long huge_page_free
 Number of available huge pages.
- unsigned long huge_page_size_kB
 Size of huge pages.

5.2.1 Detailed Description

Machine-specific Object Attributes.

5.2.2 Field Documentation

5.2.2.1 char* hwloc_obj_attr_u::hwloc_machine_attr_s::dmi_board_name

DMI board model name.

5.2.2.2 char* hwloc_obj_attr_u::hwloc_machine_attr_s::dmi_board_vendor

DMI board vendor name.

5.2.2.3 unsigned long hwloc_obj_attr_u::hwloc_machine_attr_s::huge_page_free

Number of available huge pages.

5.2.2.4 unsigned long hwloc_obj_attr_u::hwloc_machine_attr_s::huge_page_size_kB

Size of huge pages.

$5.2.2.5 \quad unsigned\ long\ hwloc_obj_attr_u::hwloc_machine_attr_s::memory_kB$

Size of memory node.

The documentation for this struct was generated from the following file:

5.3 hwloc_obj_attr_u::hwloc_memory_attr_s Struct Reference

Node-specific Object Attributes.

#include <hwloc.h>

Data Fields

- unsigned long memory_kB Size of memory node.
- unsigned long huge_page_free

 Number of available huge pages.

5.3.1 Detailed Description

Node-specific Object Attributes.

5.3.2 Field Documentation

5.3.2.1 unsigned long hwloc_obj_attr_u::hwloc_memory_attr_s::huge_page_free

Number of available huge pages.

5.3.2.2 unsigned long hwloc_obj_attr_u::hwloc_memory_attr_s::memory_kB

Size of memory node.

The documentation for this struct was generated from the following file:

5.4 hwloc_obj_attr_u::hwloc_misc_attr_s Struct Reference

Misc-specific Object Attributes.

#include <hwloc.h>

Data Fields

• unsigned depth

Depth of misc object.

5.4.1 Detailed Description

Misc-specific Object Attributes.

5.4.2 Field Documentation

5.4.2.1 unsigned hwloc_obj_attr_u::hwloc_misc_attr_s::depth

Depth of misc object.

The documentation for this struct was generated from the following file:

5.5 hwloc_obj Struct Reference

```
Structure of a topology object.
```

```
#include <hwloc.h>
```

Data Fields

- hwloc_obj_type_t type Type of object.
- signed os_index

 OS-provided physical index number.
- char * name

 Object description if any.
- union hwloc_obj_attr_u * attr Object type-specific Attributes.
- unsigned depth

 Vertical index in the hierarchy.

"cousin" list below.

- unsigned logical_index

 Horizontal index in the whole list of similar objects, could be a "cousin_rank" since it's the rank within the
- struct hwloc_obj * next_cousin Next object of same type.
- struct hwloc_obj * prev_cousin
- Previous object of same type.struct hwloc_obj * father
 - Father, NULL if root (system object).
- unsigned sibling_rank
 Index in father's children[] array.
- struct hwloc_obj * next_sibling

 Next object below the same father.
- struct hwloc_obj * prev_sibling

 Previous object below the same father.
- unsigned arity

 Number of children.
- struct hwloc_obj ** children

 Children, children[0 .. arity -1].

- struct hwloc_obj * first_child
 First child.
- struct hwloc_obj * last_child Last child.
- void * userdata

Application-given private data pointer, initialized to NULL, use it as you wish.

hwloc_cpuset_t cpuset
 CPUs covered by this object.

• signed os_level OS-provided physical level.

5.5.1 Detailed Description

Structure of a topology object. Applications mustn't modify any field except userdata .

5.5.2 Field Documentation

5.5.2.1 unsigned hwloc_obj::arity

Number of children.

5.5.2.2 union hwloc_obj_attr_u* hwloc_obj::attr [write]

Object type-specific Attributes.

5.5.2.3 struct hwloc_obj** hwloc_obj::children [read]

Children, children[0.arity-1].

5.5.2.4 hwloc_cpuset_t hwloc_obj::cpuset

CPUs covered by this object.

5.5.2.5 unsigned hwloc_obj::depth

Vertical index in the hierarchy.

5.5.2.6 struct hwloc_obj* hwloc_obj::father [read]

Father, NULL if root (system object).

5.5.2.7 struct hwloc_obj* hwloc_obj::first_child [read]

First child.

5.5.2.8 struct hwloc_obj* hwloc_obj::last_child [read]

Last child.

5.5.2.9 unsigned hwloc_obj::logical_index

Horizontal index in the whole list of similar objects, could be a "cousin_rank" since it's the rank within the "cousin" list below.

5.5.2.10 char* hwloc_obj::name

Object description if any.

5.5.2.11 struct hwloc_obj* hwloc_obj::next_cousin [read]

Next object of same type.

5.5.2.12 struct hwloc_obj* hwloc_obj::next_sibling [read]

Next object below the same father.

5.5.2.13 signed hwloc_obj::os_index

OS-provided physical index number.

5.5.2.14 signed hwloc_obj::os_level

OS-provided physical level.

5.5.2.15 struct hwloc_obj* hwloc_obj::prev_cousin [read]

Previous object of same type.

5.5.2.16 struct hwloc_obj* hwloc_obj::prev_sibling [read]

Previous object below the same father.

5.5.2.17 unsigned hwloc_obj::sibling_rank

Index in father's children[] array.

5.5.2.18 hwloc_obj_type_t hwloc_obj::type

Type of object.

5.5.2.19 void* hwloc_obj::userdata

Application-given private data pointer, initialized to NULL, use it as you wish.

The documentation for this struct was generated from the following file:

5.6 hwloc_obj_attr_u Union Reference

Object type-specific Attributes.

#include <hwloc.h>

Data Structures

- struct hwloc_cache_attr_s

 Cache-specific Object Attributes.
- struct hwloc_machine_attr_s

 Machine-specific Object Attributes.
- struct hwloc_memory_attr_s

 Node-specific Object Attributes.
- struct hwloc_misc_attr_s
 Misc-specific Object Attributes.

Data Fields

- struct hwloc_obj_attr_u::hwloc_cache_attr_s cache Cache-specific Object Attributes.
- struct hwloc_obj_attr_u::hwloc_memory_attr_s node Node-specific Object Attributes.
- struct hwloc_obj_attr_u::hwloc_machine_attr_s machine Machine-specific Object Attributes.
- struct hwloc_machine_attr_s system System-specific Object Attributes.
- struct hwloc_obj_attr_u::hwloc_misc_attr_s misc *Misc-specific Object Attributes*.

5.6.1 Detailed Description

Object type-specific Attributes.

5.6.2 Field Documentation

5.6.2.1 struct hwloc_obj_attr_u::hwloc_cache_attr_s hwloc_obj_attr_u::cache

Cache-specific Object Attributes.

5.6.2.2 struct hwloc_obj_attr_u::hwloc_machine_attr_s hwloc_obj_attr_u::machine

Machine-specific Object Attributes.

5.6.2.3 struct hwloc_obj_attr_u::hwloc_misc_attr_s hwloc_obj_attr_u::misc

Misc-specific Object Attributes.

5.6.2.4 struct hwloc_obj_attr_u::hwloc_memory_attr_s hwloc_obj_attr_u::node

Node-specific Object Attributes.

5.6.2.5 struct hwloc_machine_attr_s hwloc_obj_attr_u::system [read]

System-specific Object Attributes.
